Postdoc in Statistical Genetics and Bioinformatics

We invite applications for a postdoctoral researcher position in statistical genetics and bioinformatics at the Ohio State University. The position, immediately available, requires a Ph.D. in Statistics, Biostatistics, or related areas. The successful candidate is expected to carry out original research in a National Institute of Health (NIH) funded project for developing statistical methods for gene mapping. There are also ample opportunities for collaborative research in gene expression data analysis, proteomics, epigenetics, miRNA, and other areas of bioinformatics. Many of these opportunities are in conjunction with the large volume of activities in the Mathematical Biosciences Institute (http://mbi.osu.edu). More information about the statistical genetics group and its activities are available at http://www.stat.ohio-state.edu/~statgen. Although the position does not carry a teaching responsibility, opportunities for teaching in the Department of Statistics exist if one is interested.

Inquiries and applications (including a cv, a letter describing research interests and qualifications, graduate transcripts, and three letters of references) should be sent to Professor Shili Lin (Email: shili@stat.ohio-state.edu), Department of Statistics, Ohio State University, Columbus, OH, 43210. Email applications are acceptable. Applications will be reviewed until the position is filled.

The Ohio State University is an Equal Opportunity Affirmative Action Employer. Women, minorities, veterans, and individuals with disabilities, are encouraged to apply.
